Getting Started with Photoshop (Mac) Follow these steps to get started using Photoshop on your Mac: Open Photoshop Click the Safari button and then click Open. The Photoshop application opens. Photoshop typically appears in the Dock in a dark gray icon. To view all of Photoshop, click the icon.

Designing Stencils Open a New Image Photoshop doesn't have default file types; however, you can change the default file type for Photoshop. Choose File > New to open the New Image dialog box, where you can select a new, empty image for your next image or design. Select File Type Before you start to design the new image, you need to select a file type to create the image. Choose File > Properties. Click the File Type tab.

---

Choose from the available file types. Make sure the File Type is set to Photoshop (.psd) file. Click OK.

### Designing an Image

When you are ready to create the image, you need to define where the image appears in your canvas. You can use the Image Size, or Width and Height options to define how large the image appears. In addition, you can use the Selection tool to draw an image frame that encloses the image. Select the Selection tool from the tools bar at the top of the window. To define an image frame, select the Rectangle tool from the tools bar. Drag the cursor across your canvas to create a rectangular selection to define the size of the image frame.

### Enter an Image Size

You can enter an image size for your canvas by specifying a width and a height. Using the width and height values, Photoshop creates a

new layer below the image and opens up a dialog where you can specify the image size. Enter an Image Size To create a new layer for the image frame, click on the options icon (three dots) in the Layer menu. In the Layers dialog box, select the New Layer button. From the New Layer dialog box, define the size of the image frame in pixels. The new layer definition displays the image size in pixels, along with the new layer name and an instruction. It is a good practice to place your images and shapes on a new layer so that they can be easily modified. The new layer maintains all of the transparency settings from the original image. You
