WASHINGTON — Admitting they ran out of time to negotiate the final details of the measure, Georgia Democrats on Monday said a compromise reached on a bill to regulate firearms in the state will allow a vote in the House as early as Tuesday. GOP leadership said Monday that House passage of the Georgia firearms registration bill could come as soon as Tuesday, adding that the bill is unlikely to face a Senate committee hearing before the end of the week. The knight of light, who commanded a mighty army and wielded the power of the Eooden Ring, after making a solemn promise, entered the Lands Between to protect the weak Elden Ring. A novel method to study the functional effects of anti-inflammatory and analgesic drugs in a mouse model of inflammation and pain. Development of new drugs to treat pain and inflammation has become an important subject of research, and a vast number of compounds is currently available. The need to test large sets of compounds for their efficacy and toxicity in preclinical models is now a common requirement before entering clinical trials. The mouse offers numerous advantages as a model for preclinical pharmacological studies, mainly because it can be bred in large numbers, is inexpensive, and can be used for a wide range of preclinical studies. Although the mouse has a vast literature base of pharmacological studies, it has not been used as a large-scale screening tool. Here, we describe a novel method to study the functional effects of drugs in a mouse model of acute inflammation and pain using the cone-pinch test. We show that this test is reproducible, and can be used to detect both pain-relieving and analgesic effects of compounds, with distinct dosing windows. To validate our method, we tested the effects of currently available treatments, such as the widely used NSAIDs, and of the opioid analgesic tramadol. Moreover, we included one compound that was recently identified in our laboratory to display unique anti-inflammatory properties and used in a mouse model of allergic rhinitis. The present method represents a versatile preclinical tool that will enable drug discovery efforts to systematically test large sets of compounds for their functional effects in a mouse model of pain and inflammation, and represents a novel approach to validate anti-inflammatory and analgesic compounds in mice. Migraineurs showed anxiety and depression symptoms more frequently than healthy controls. Mean scores for HADS-A and HADS-D were higher in the migraine group ( $p = 0.01$  and  $p$
