Viacoin: the Bitcoin of the One of the things I enjoy the most about Linux is the freedom to modify everything. This freedom allows me to do things that may not be good for the computer, like install Linux. But sometimes, the restriction doesn't buy the desired result, either. And while I've had a Lenovo for a while, I've decided to switch to the open source operating system of my dreams. Perhaps you feel the same way. Want a cheap alternative? Still, the most common retail brand, which is what

"rockchip-device-list-optimus-r-x6a-consumer-edition-linux-bricked" The lagged-swap thing is for a system that's swapping which is not going to happen for a brief moment if your swap is larger than your RAM. "it doesn't need to swap out the swap file" You'd swap out pages of RAM when you want to access something larger than the page size on the RAM. Having your swap file on a file-system that has bigger blocks generally has nothing to do with it. WordPress website builder. Completely free website builder. It is completely free and hosted on WordPress.org. #dualpowerpc.com/168-comments.html. Press Preview, 2019-04-05, available by Amazon (hardcover)Q: MySQL InnoDB - Storing variable number of rows with PK After a while of trawling SO for various incarnations of this question, I'm still struggling to find a solution I can apply to my particular problem. If anyone has a "better" way to do this please feel free to point me in the direction of a post or resource you may have found in your own investigations. I have three related tables: Account: AccountId (PK) Transaction: TransactionId (PK, unique) Amount AccountTransaction: TransactionId (PK) AccountId (FK) The AccountTransaction table stores which transactions were paid from which account, e.g: TransactionId | AccountId ----- | ----- 123 | 1 124 | 1 125 | 2 126 | 2 127 | 2 128 | 3 Now if I want to query this data, e.g: SELECT * FROM Account JOIN AccountTransaction ON Account.AccountId = AccountTransaction.AccountId JOIN Transaction ON AccountTransaction.TransactionId = Transaction.TransactionId So the results of this query would be as follows: AccountId | Transaction
