Windows 7 Enterprise does not support
UEFI BIOS versions older than the April
2012 release, the UEFI BIOS provided
with Windows 7 Enterprise must be
updated using a utility such as AUEFI. It is
not possible to update a UEFI BIOS
manually using custom firmware-only disk
images, as described above, for any
previous release of Windows 7 Enterprise.

When it is updated, the AUEFI utility warns users that they may lose the ability to boot from non-UEFI bootable devices such as a Windows CD/DVD or USB drive. In such situations, users would not be able to boot Windows 7 Enterprise even if they installed or updated Windows 7 Enterprise after the April 2012 release. Old releases of the UEFI BIOS such as Release 1.7.x used in Windows 7 Enterprise are compatible with Windows 10, but they cannot boot from legacy bootable devices, including Windows 7 Enterprise media, or from older releases of Windows 7 Enterprise media. For example, an OEM BIOS used with pre-April 2012 Windows 7 Enterprise could not boot from a Windows 10 disk

and a Windows 7 Enterprise DVD/CD. A UEFI BIOS Release 2.x or 3.x used in Windows 7 Enterprise is compatible with Windows 10 and it may be able to boot from a Windows 10 DVD/CD, but it cannot boot from legacy bootable devices such as a Windows 7 DVD/CD or a Windows 7 Enterprise media disk. Windows 7 Enterprise is not supported on computers with UEFI BIOS. For example, the Apple Boot Camp Support Guide does not list Windows 7 Enterprise as a supported operating system on computers with a recent UEFI BIOS release. In contrast, the Windows 10 license agreement specifically excludes UEFI-based mode. Live mode and Activation The WinPE boot CD/DVD can also

support Windows Live. There are
